**CARLO GAVAZZI COMPUTING SOLUTIONS LAUNCHES MEDIAPOINT<sup>XP</sup>  
MEDIA GATEWAY SOLUTION AT SPRING 2007 VON**

*Industry's First Application-Driven Media Gateway Solution Delivered in Partnership with MDL Solutions' XerXes NG Media Gateway Control Application*

**Brockton, Mass.** - Carlo Gavazzi Computing Solutions, an innovative leader in electronic packaging and system expansion solutions, will introduce its new MediaPoint<sup>XP</sup> media gateway solution for VoIP services and applications in booth #1219 at Spring 2007 VON, March 19-22, in San Jose.

MediaPoint<sup>XP</sup> is the industry's first complete media gateway solution controlled by a Windows server-based application. XerXes NG, from MDL Solutions, provides enhanced media gateway control functionality to the MediaPoint<sup>XP</sup>. An application-driven media gateway, the MediaPoint<sup>XP</sup> and XerXes NG provide open interfaces that allow users to integrate applications with their media gateway for a truly customized solution.

"The VoIP services and solutions market has matured to the point where providers need to deliver value-added services to customers," says Tim Resker, vice president of business development for Carlo Gavazzi Computing Solutions. "MediaPoint<sup>XP</sup> and XerXes NG are a step beyond the traditional closed architecture media gateway solutions because they enable a more powerful service creation environment."

MediaPoint<sup>XP</sup> is delivered in a 1U rackmount enclosure and supports between four and 24 T1/E1s. An optional Ethernet chassis management port allows MediaPoint<sup>XP</sup> gateways deployed across a network to be completely managed and controlled from a single application server. Available for immediate delivery, MediaPoint<sup>XP</sup> pricing starts at \$14,160, including bundled licensing for XerXes NG.

For more information on Carlo Gavazzi Computing Solutions' MediaPoint<sup>XP</sup>, visit booth # 1219 at Spring 2007 VON.
