## **CARLO GAVAZZI COMPUTING SOLUTIONS INTRODUCES NEW MEDIAPOINT XP**

*Media gateway and integrated control application provide an unprecedented range of features for VoIP to PSTN access*

**Brockton, Mass.** – Carlo Gavazzi Computing Solutions, an innovative leader in electronic packaging and systems integration, introduces its new feature-rich MediaPoint XP media gateway solution. Designed for VoIP networks and applications, the MediaPoint XP provides a cost effective and reliable gateway between the PSTN and SIP-based applications.

MediaPoint XP is the first VoIP media gateway solution to bundle a comprehensive media gateway with a control application, XerXes NG, which runs on a Windows Server in the network and controls multiple MediaPoint XP gateways. The XerXes NG control application, developed by MDL Solutions of Tustin, CA, operates as a softswitch and provides complete call control between SIP-based applications and devices and T1/E1 access points with ISDN, CAS or SS7 signaling. MediaPoint XP is particularly unique among media gateway solutions in its support for SS7 that includes both TCAP and ISUP. In addition, MediaPoint XP provides globally approved T1/E1 interfaces allowing it to be internationally deployed as a PSTN connected device.

The MediaPoint XP is engineered to provide a breadth of customizable features, allowing application developers and service providers to offer value-added, private labeled services without the typical costs associated with a separate enhanced services platform. In addition to media gateway functionality, MediaPoint XP also supports media server features such as a message playout, message and call recording, and conferencing. Applications can access these capabilities through either a VxML or scripting language interface. An embedded database with SQL and ODBC interfaces also allows applications to access and modify call detail records, routing tables, SIP configuration and redundancy/failover parameters. In a 1U rackmount enclosure, MediaPoint XP is available immediately in configurations supporting 2 to 24 T1/E1's.

For more information and specifications for Carlo Gavazzi Computing Solutions' MediaPoint XP please visit [www.gavazzi-computing.com/mediapointxp](http://www.gavazzi-computing.com/mediapointxp).
